New project

A project is where you house your files (repository), plan your work (issues), and publish your documentation (wiki), among other things.

All features are enabled for blank projects, from templates, or when importing, but you can disable them afterward in the project settings.

Information about additional Pages templates and how to install them can be found in our [Pages getting started guide](#).

Tip: You can also create a project from the command line. [Show command](#)

Blank project	Create from template	Import project
<p>Project name</p> <input type="text" value="test"/>		
<p>Project URL</p> <input type="text" value="http://192.168.100.200:8080"/>		<p>Project slug</p> <input type="text" value="test"/>
<p>Want to house several dependent projects under the same namespace? Create a group.</p>		
<p>Project description (optional)</p> <input type="text" value="Description format"/>		
<p>Visibility Level ⓘ</p> <p><input checked="" type="radio"/> Private Project access must be granted explicitly to each user.</p> <p><input type="radio"/> Internal The project can be accessed by any logged in user.</p> <p><input type="radio"/> Public The project can be accessed without any authentication.</p>		
<p><input checked="" type="checkbox"/> Initialize repository with a README Allows you to immediately clone this project's repository. Skip this if you plan to push up an existing repository.</p>		
<input type="button" value="Create project"/>		<input type="button" value="Cancel"/>

Revision #4
